

Rohit

Portfolio: [SimplyRohit](#)

Github: github.com/SimplyRohit

Email: simplyrohit.tech@gmail.com

Technical Skills

- **Languages:** TypeScript, JavaScript, Rust, Python, SQL, Solidity
- **Frontend:** React, Next.js, React Native (Expo), Tailwind CSS, Zustand, Monaco Editor, Xterm.js
- **Backend & APIs:** Node.js, Bun, Hono, Elysia, oRPC, tRPC, REST, MQTT, WebSockets, Socket.io
- **Databases & ORM:** PostgreSQL, NeonDB, Drizzle ORM, Prisma
- **Payments & Auth:** Stripe (PaymentSheet, 3DS/SCA, Terminal, Webhooks, off-session), Better Auth
- **Infrastructure & IoT:** Docker, AWS, Cloudflare R2, Turborepo, TCP/MQTT protocols, Solana/Anchor

Professional Experience

- **Lunar Solutions** 2025 – Present
Full Stack Developer Remote
 - Engineered **Zyloq** (live on App Store) – a Swiss IoT power-bank rental ecosystem: Next.js + oRPC + Drizzle backend, React Native app, and a dedicated **Bun/Hono Station Communication Service** handling TCP/MQTT protocol for physical hardware dispensers; implemented real-time inventory caching via SSE event bus.
 - Built a **POS terminal system** for Zyloq with Stripe Terminal integration – card-present payments, rental lifecycle management, and automatic refund/overage settlement synced via hardware return events.
 - Implemented **PSD2/SCA-compliant** Stripe payment flows – off-session charges, 3DS recovery with in-app PaymentSheet fallback, webhook-driven hardware unlock, and distributed PostgreSQL advisory locks with idempotency keys ensuring zero double-charges.
 - Shipped **Parkex** (live on App Store) – a Zurich parking reservation platform with 9 concurrent cron jobs (pg_advisory_lock serialised), Stripe off-session billing, event-driven pre-cleanup, daily billing cycles, and auto-close logic across Swiss time zones.
 - Built **YourApplicant** – a multi-tenant Swiss apprenticeship marketplace serving 500+ schools with role-based access control, magic-link auth, Stripe subscription billing, and Cloudflare R2 document uploads; reduced frontend load times by 40% via code splitting.
- **SimStudioAI** 2025
Open Source Contributor Remote
 - Contributed core automation modules for Telegram workflow integration, enabling seamless bot interactions and message automation.
 - Enhanced codebase modularity and extensibility, improving component reusability by 35%

Featured Projects

- **Deprbo – Decentralized Prediction Market Platform**
 - Engineered a full-stack Web3 DApp on Solana blockchain using Next.js frontend and Rust + Anchor Framework for smart contracts, enabling trustless binary outcome prediction markets.
 - Developed custom blockchain indexer for real-time market data aggregation, reducing query latency by 60% compared to direct RPC calls.
 - Integrated NeonDB with Drizzle ORM for off-chain data caching and event-driven architecture for seamless user experience.
- **Cloud IDE – Browser-Based Development Environment**
 - Built production-ready cloud IDE supporting multiple programming languages with Monaco Editor integration and full terminal emulation via Xterm.js.
 - Orchestrated isolated Docker containers per user session on AWS infrastructure, ensuring security and resource optimization.
 - Designed auto-scaling container management system handling 100+ concurrent development environments.
- **VStack – AI-Powered Website Generation Platform**
 - Developed intelligent website generator leveraging generative AI models to create production-ready, responsive websites from natural language descriptions.
 - Implemented secure authentication and authorization using Auth.js with multi-provider support and session management.

Education

- **Government Engineering College Bikaner** Rajasthan, India
Master of Computer Applications (MCA) 2024 – Present
